Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 July 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on July 18, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6190269 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Specification

The abstract of the disclosure is objected to because abstract is too long. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Higuchi et al. (USPN 6129640).

Higuchi et al. discloses a multi-piece golf ball having improved spin properties (See Abstract). The golf ball comprises a solid core, having a diameter of 28 to 40mm, an intermediate layer, having a gage or thickness of 0.2 to 3.0mm, and a cover having a gage or thickness of 0.5 to 3.2mm (See Entire document). The core has a surface

Art Unit: 3711

hardness of Shore D 30 to 55, equivalent to JIS-C 50 to 82 (See Column 3, lines 17 through 24). Higuchi et al. notes that the difference in the hardness between any two positions measured in a cross section of the core should be no more than 10 Shore D units. This implies that the center hardness of the core is at least 20 Shore D, or 36 JIS-C, in which the difference between the surface hardness and the center hardness is at least 14 JIS-C units. The intermediate layer is has a Shore D hardness of 20 to 50, JIS-C 36 to 76, and is softer than the surface hardness of the core by at least 6 Shore D units. From the above, the intermediate must be at least 24 Shore D, or 42 JIS-C, producing a difference in surface hardness and intermediate layer hardness of at least 8 JIS-C. The cover has a Shore D hardness of 45 to 68 (See Column 5, first paragraph). One having ordinary skill in the art would have found the present invention to be routine optimization of that disclosed by Higuchi et al. in order to obtain improved spin as well as satisfactory feel and flight distance.

Allowable Subject Matter

Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
